

Listing of updated claims for the above application.

1-35 (canceled)

36 (previously presented): A vertically positioned calendar system, comprising:

- (A) a calendar having a calendar date table and a calendar picture, and
- (B) a frame assembly having
  - (a) a frame window,
  - (b) a transparent plate placed behind said frame window, and
  - (c) supporting means
    - (i) for supporting said calendar in said frame assembly, and
    - (ii) for displaying said calendar picture through said transparent plate and displaying said calendar date table below said transparent plate.

37 (previously presented): The vertically positioned calendar system of Claim 36 in which

- (a) said frame window has a first portion and a second portion below said first portion, and
- (b) said transparent plate is placed behind said first portion of said frame window.

38 (previously presented): The vertically positioned calendar system of Claim 36 in which

- (A) said calendar includes a first calendar picture and a second calendar picture,
- (B) said frame assembly is rotatable between
  - (a) a first position in which said calendar date table and said first calendar picture are lined up vertically, and
  - (b) a second position in which said calendar date table and said second calendar picture lined up horizontally.

39 (previously presented): The vertically positioned calendar system of Claim 36 in which

- (A) said calendar includes
  - (a) a first calendar picture and a second calendar picture, and
  - (b) a first calendar date table and a second calendar date table,
- (B) said frame assembly is rotatable between
  - (a) a first position in which said first calendar date table and said first calendar picture are lined up vertically, and
  - (b) a second position in which said second calendar date table and said second calendar picture are lined up horizontally.

40 (previously presented): The vertically positioned calendar system of Claim 36 in which said frame assembly has a spring clamp for holding said calendar date table in said frame assembly.

41 (new): A framed display, comprising:

- (A) a background picture,
- (B) a trimmed composite picture in which said composite picture is defined as a picture created by merging two or more pre-existing images or pictures, and
- (C) a picture frame having a transparent plate for supporting said trimmed composite picture in front of, and spaced apart from said background picture.

42 (new): The framed display of Claim 41 in which said picture frame also has bending means for bending said background picture into a concavo-convex curvature for imparting a three dimensional effect to said background picture.

43 (new): The framed display of Claim 42 also comprising a bottom edge picture positioned at right angle to said background picture.

44 (new): The framed display of Claim 42 also comprising a three dimensional art placed between said transparent plate and said background picture.

45 (new): The framed display of Claim 41 in which said trimmed composite picture is a self trimmed composite picture.

46 (new): The framed display of Claim 41 in which said composite picture is a computer-generated composite picture.

47 (new): The framed display of Claim 41 in which said composite picture comprises:

- (a) a template picture, and
- (b) a person's image merged with said template picture.

48 (new): A picture frame for mounting and displaying one or more of the following contents:

- (a) a background picture, (b) a floating picture, (c) a bottom edge picture, (d) a 3D art, comprising:
  - (A) holding means for removably holding said background picture in said picture frame,
  - (B) bending means for bending said background picture into a concavo-convex curvature for imparting a three dimensional effect to said background picture,
  - (C) a front opening,
  - (D) a top opening, and
  - (E) a frame glass member for covering said front opening and said top opening.

49 (new): The picture frame of Claim 48 in which said bending means is a curved back wall.

50 (new): The picture frame of Claim 48 in which said frame glass member has a flexible glass sheet for holding and displaying said floating picture.

51 (new): The picture frame of Claim 48 also comprising a bottom plate positioned at right angle to said background picture for supporting and displaying said bottom edge picture.

52 (new): The picture frame of Claim 48 also comprising a magnetic bottom plate positioned at right angle to said background picture for supporting and displaying said 3D art.

53 (new): The picture frame of Claim 48 also comprising a bottom plate having an up-and-down surface structure engageable with said 3D art.

54 (new): The picture frame of Claim 48 also comprising:

(a) a bottom opening, and

(b) an insertion member for

(i) holding said 3D art,

(ii) inserting said 3D art through said bottom opening, and

(iii) positioning said 3D art between said frame glass member and said background picture.

55 (new): The picture frame of Claim 54 in which said insertion member also has electric means for activating said 3D art.
